INFORMATION DISCLOSURE STATEMENT

Dear Sir:

This Information Disclosure Statement is submitted:

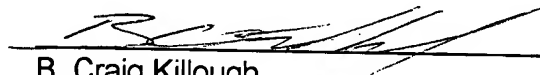

- ☒ under 37 CFR 1.97(b), or
(Within three months of filing national application; or date of entry of international application; or before mailing date of first office action on the merits; whichever occurs last)
- ☐ under 37 CFR 1.97(c) together with either a:
☐ Statement under 37 CFR 1.97(e), or
☐ a \$180.00 fee under 37 CFR 1.17(p), or
(After the CFR 1.97(b) time period, but before final action or notice of allowance, whichever occurs first)
- ☐ under 37 CFR 1.97(d) together with a:
☐ Statement under 37 CFR 1.97(e), and
☐ a \$180.00 fee set forth in 37 CFR 1.17(p).
(Filed after final action or notice of allowance, whichever occurs first, but before payment of the issue fee)

Serial Number: 10/085,359

X Applicant(s) submit herewith Form PTO 1449-Information Disclosure Citation together with copies, of patents, publications or other information of which applicant(s) are aware, which applicant(s) believe(s) may be material to the examination of this application and for which there may be a duty to disclose in accordance with 37 CFR 1.56.

It is requested that the information disclosed herein be made of record in this application.

Respectfully submitted,

B. Craig Killough
Attorney for Applicant

ABSTRACT

A process for printing images by means of an electrographic or electrostatic device using a dual-energy curable toner comprising energy-activation components including radiation-curable sites and reactive functional groups. Without substantially activating the reactive components, an image is formed during the process of printing the image onto a medium. Subsequently the reactive functional groups are activated upon applying the first energy source to promote adhesive strength of the image to the medium by cross-linking and bonding the image permanently onto the medium or another medium through a transfer process. A second energy source is applied either simultaneous with the first energy source or subsequent to the first energy source to promote cohesive strength of the image by cross-linking within the toner particles. The formed image is thereby permanently bonded onto the substrate with substantially enhanced resistance to chemical processes, such as cleaners or laundry products, to weather, radiation, and wearing..

BACKGROUND OF THE INVENTION

This invention relates to a printing process which involves producing an electrographic or electrostatic printing toner, printing an image by an electrographic or
